## MarinTrust RS V2.0

# BYPRODUCT FISHERY ASSESSMENT TEMPLATE REPORT

MarinTrust Ltd, Unit C, Printworks, 22 Amelia Street, London, SE17 3BZ, United Kingdom

#### TABLE 1 APPLICATION DETAILS AND SUMMARY OF THE ASSESSMENT OUTCOME

	Species:	Black bream/seabream (Spondyliosoma cantharus)	
	Geographical area:	FAO27 Atlantic Northeast	
Fishery Under Assessment	Country of origin of the product:	France	
	Stock:	ICES Divisions 4a-c, 6a, 7a,b,d-h,j	
Date	November 2020		
Report Code	188-2020		
Assessor	Vi	rginia Polonio	
Country of origin of the product - PASS	FRANCE		
Country of origin of the product - FAIL	NA		

<b>Application details ar</b>	nd summary of the as	sessment outcome

<b>Certification Body Details</b>				
Name of Certification	Body: SAI Global			
Assessor	Peer Reviewer	Assessment Days	Initial/Surveillance/ Re-approval	
Virginia Polonio Géraldine Criquet		0.5	Re-approval	
<b>Assessment Period</b>	November 2020			

Scope Details		
Main Species	Black bream/seabream (Spondyliosoma cantharus)	
Stock	ICES Divisions 4a-c, 6a, 7a,b,d-h,j	
Fishery Location	AO 27 Atlantic Northeast	
ManagementAuthority (Country/ State)	European Union and Direction des Pêches Maritimes et de l'Aquaculture	
Gear Type(s)	Trawls	
Outcome of Assessment		
Peer Review Evaluation	Agree with Recommendation	
Recommendation	APPROVED	

#### **TABLE 2. ASSESSMENT DETERMINATION**

#### **Assessment Determination**

If any species is categorised as Endangered or Critically Endangered on IUCN's Red List, or if it appears in the CITES appendices, it cannot be approved for use as IFFO RS raw material. Black bream/seabream (*Spondyliosoma cantharus*) do not appear as Endangered or Critically Endangered on IUCN's Red List, nor do they appear in CITES appendices; therefore, Black bream/seabream is eligible for approval for use as IFFO RS by-product raw material.

The stock structure is unknown and no assessment is known to be conducted. A management unit is considered within English Channel and Celtic Sea (Pawson, 1995). There is no agreed management plan for Black bream/seabream in this area and no reference points are defined for this stock.

Consequently, the lack of scientific information on the stock status induced the use of the risk-assessment style approach. Therefore, the stock has been assessed under category D.

Hence, Black bream/seabream (*Spondyliosoma cantharus*) is **APPROVED** by SAI Global assessors in the assessment area for the production of fishmeal and fish oil under the current IFFO RS v 2.0 by-products standard.

#### **Peer Review Comments**

Notes for On-site Auditor

The stock is not subject to a specific management regime and there is no stock assessment conducted. Therefore, the species has been classified as Category D.

The peer reviewer agrees with the outcome of the risk-assessment and with the recommendation made by the assessor.

#### SPECIES CATEGORISATION

**NB:** If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MARINTRUST raw material.

#### **IUCN Redlist Category**

Byproduct material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

Byproduct material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

#### **TABLE 3 SPECIES CATEGORISATION TABLE**

Common name	Latin name	Stock	Management	Category	IUCN Red List Category <sup>1</sup>	CITES Appendix 1 <sup>2</sup>
Black bream/seabream	Spondyliosoma cantharus	ICES Divisions 4a- c, 6a, 7a,b,d-h,j	EU and France	D	NT	No

<sup>&</sup>lt;sup>2</sup> https://cites.org/eng/app/appendices.php

#### **CATEGORY D SPECIES**

Category D species are those which make up less than 5% of landings and are not subject to a species-specific management regime. In the case of mixed trawl fisheries, Category D species may make up the majority of landings. The comparative lack of scientific information on the status of the population of the species means that a risk-assessment style approach must be taken.

D1	Species Name  Black bream/seabream (Spondyliosoma cantharus)		
	Productivity Attribut	te Value	Score

#### **SOCIAL CRITERION**

In addition to the scored criteria listed above, applicants must commit to ensuring that vessels operating in the fishery adhere to internationally recognised guidance on human rights. They must also commit to ensuring there is no use of enforced or unpaid labour in the fleet(s) operating upon the resource.

## Appendix B: From MARINTRUST Standard V2.0 Annex 2: Fish By-product Assessment Methodology

#### **Definition of a Fish By-product**

A by-product is a useful and marketable product that is not the primary product being produced. A marketable by-product is from a process that can technically not be avoided. This includes materials that may be traditionally defined as waste such as industrial scrap that is subsequently used as a raw material in a different manufacturing process.

"Fish By-products" refers to commodities that are manufactured from fish, including shellfish, and crustaceans in a form that is different than conventional foods and which are intended for human consumption (either directly or as a food ingredient). Fish By-products include, but are not limited to:

- By-products derived from fish, including fish cartilage, fish oils, and fish proteins; and
- By-products derived from the carapaces of crustaceans; but do not include marine plants or marine plant products.

#### (Canadian Food Inspection Agency Definition)

In addition, a whole fish which is rejected on an intrinsic quality ground e.g. does not meet the specification for human consumption due to physical damage or the quality is substandard. These whole fish shall in these cases be classified as a by-product from the human consumption fishery, and can be used for marine ingredients production.

A whole catch of fish that is rejected by a fish processing factory on economic grounds is not considered to be a fish by-product. This fish can only be used for marine ingredients production if the fishery has been assessed and approved under the requirements of the IFFO Responsible Sourcing Standard.

#### Why utilise Fish By-products?

#### **FAO Code of Conduct for Responsible Fisheries**

#### **General Principles Article 6**

**6.7** The harvesting, handling, processing and distribution of fish and fishery products should be carried out in a manner which will maintain the nutritional value, quality and safety of the products, reduce waste and minimize negative impacts on the environment.

#### Responsible fish utilisation Article 11.1

**11.1.8** States should encourage those involved in fish processing, distribution and marketing to reduce post-harvest losses and waste.

#### Benefits of Including Fish By-Products in the MARINTRUST Standard:

- 1. Improved fish resource utilisation
- 2. Reduction in waste for nutritional value
- 3. 35% of fish by-products are currently used to make quality fishmeal and oil
- 4. Excellent Economic return
- 5. Better compliance with FAO Code of Conduct for Responsible Fisheries

#### What Fish By-products cannot be used?

#### 1. IUCN

Fishery By-products shall Not be taken from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for certain categories;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

Fish By-product material may be used from the vulnerable category, but it shall incur a fishery surveillance conducted by the certification body prior to it being included in the scope of this standard.

• VULNERABLE (VU) facing a high risk of extinction in the wild.

The Fish By-product material from these species will be acceptable for use in the scope of this standard;

- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.

Fish By-product material may be used from the following category, but it shall incur a fishery surveillance prior to it being included in the scope of this standard;

DATA DEFICIENT (DD) and NOT EVALUATED (NE)

The fishery surveillance conducted by the certification body will review the following areas:

#### **Stock Assessment**

- From a recognised Institution
- Fisheries are recognised as legal
- Fisheries do not contradict scientific opinion

#### 2. FAO Code of Conduct for Responsible Fisheries

In addition the Fish By-products shall not come from fisheries that do not comply with the following criteria;

- 1. Fisheries should prohibit dynamiting, poisoning and other comparable destructive fishing practices.
- **2.** Fishery material shall not be from IUU fishing activity nor sourced from vessels officially listed as engaging in illegal, unreported and unregulated (IUU) fishing activity.

#### **Sources of Information**

- 1. Food Standards Agency
- 2. Canadian Food Inspection Agency
- 3. DEFRA
- 4. GAA Feed mill BAP standard
- 5. EU Commission
